Interactive notebooks: Sharing the code

The free IPython notebook makes data analysis easier to record, understand and reproduce.

Repositories

Git is a **software** to track any changes on my files, that namely have my data **analysis projects**.

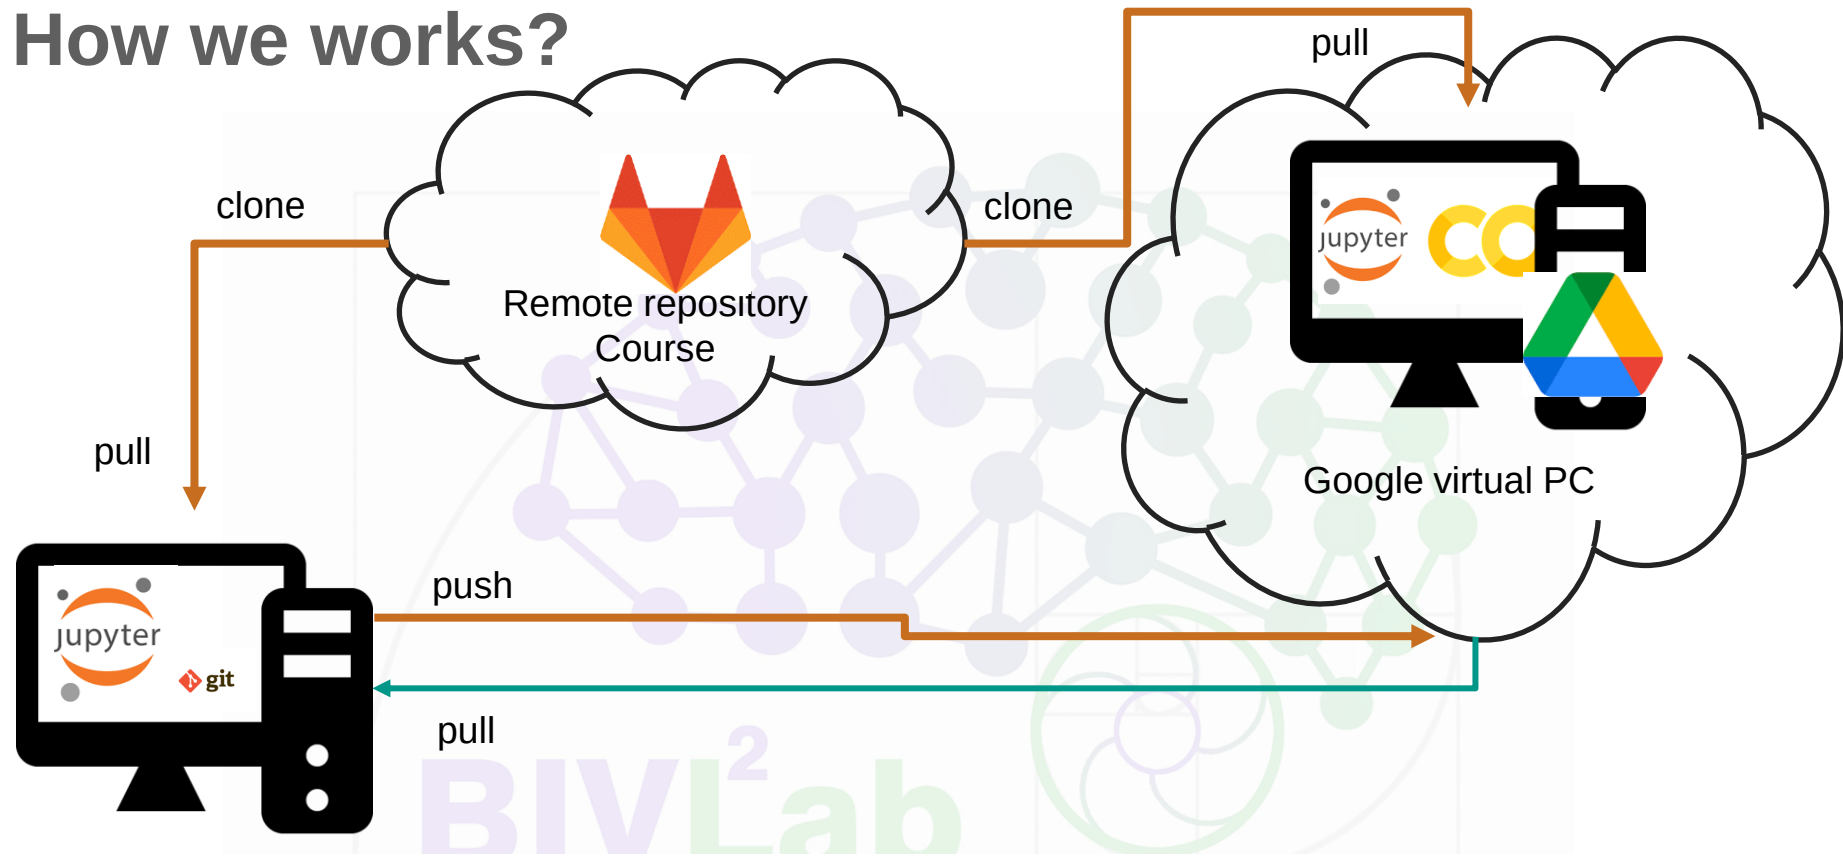

GitLab or GitHub are **hosting internet** that **understand** control version language provided by Git.

We can clone the projects, like the data analysis course

- We can have our proper project
- We can share and work in a team with a unique project

How we works?

THANK YOU VERY MUCH !

... It's time to wake up
